

Manage your slot-floor with
minimum investment and
best ever value for money.

slotscanner™
Slot management system

 **advansys**
Gaming Technology

You can either control one casino or a multi-site operation - all from a single location.

Slot management system

SlotScanner™ is a powerful slot management system offering Accounting & Cage, Ticketing, Player Tracking, Cashless and Casino Reception features, as well as a Progressive or Mystery Jackpot System. You can either control one casino or a multi-site operation - all from a single location.

With SlotScanner™ Accounting & Cage you can get a grip of your accounting and cage processes in your slot department with minimum investment and best ever value for money.

Control, monitor and analyze the financial, security, maintenance and activity time issues of each and every one of your slot machines. Also, automate and optimize your business processes, decrease labor costs and increase efficiency of the floor personnel. In doing that, you will save money, generate new revenue and be able to predict upcoming trends.

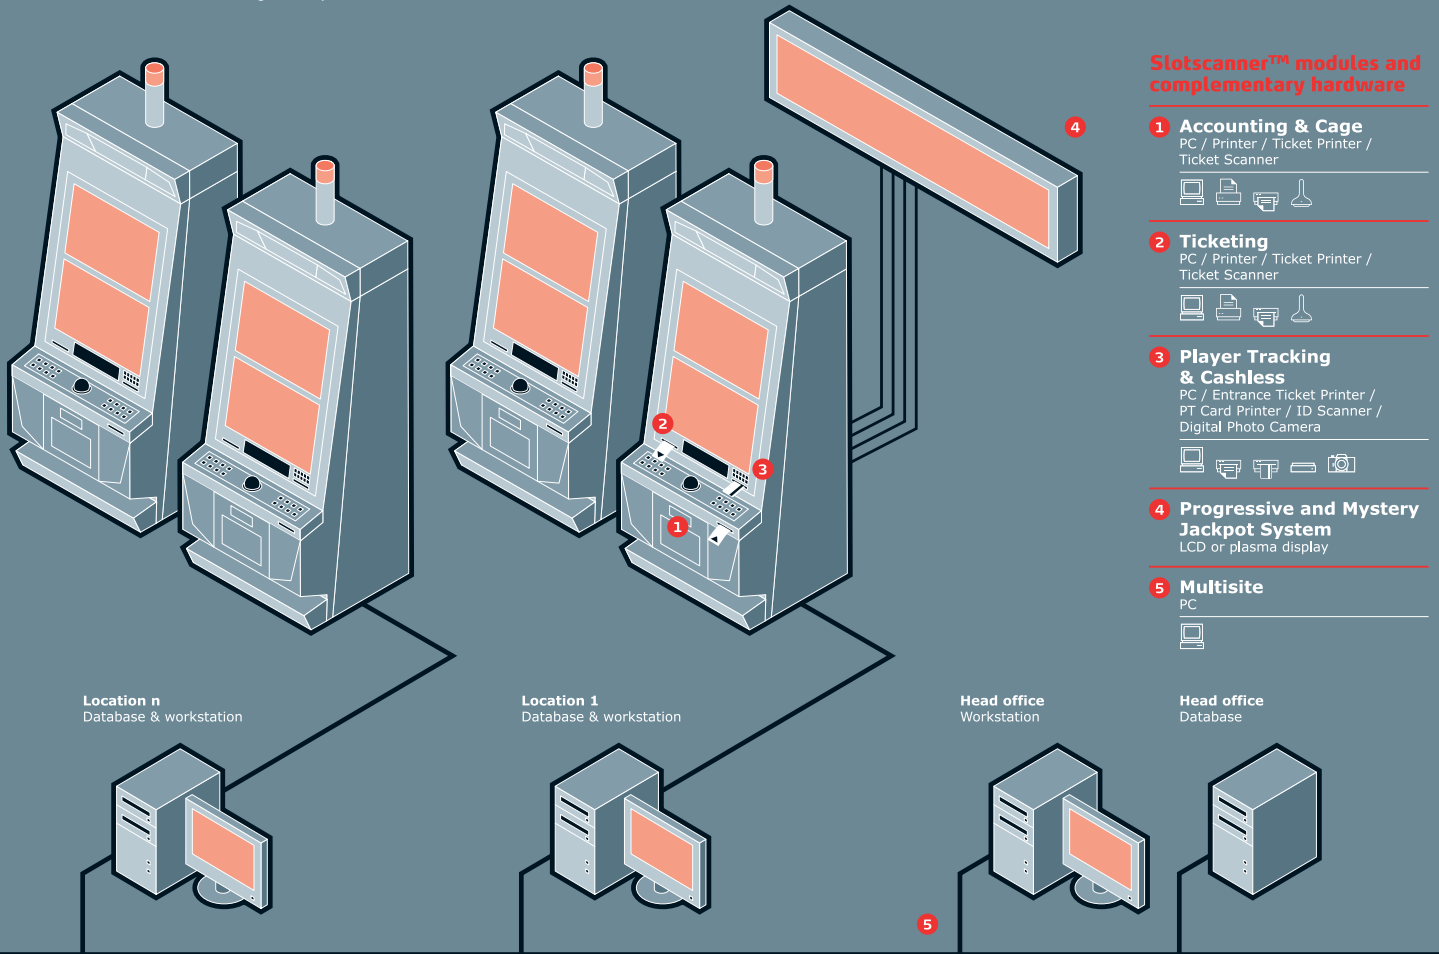

With SlotScanner™ Ticketing you can additionally optimize your slot floor operations with reduction or total elimination of coin operations whereby you can offer extra comfort and benefits to your players.

SlotScanner™ CashLess module increases comfort by using individual or generic plastic credit cards for all the money transfers on the casino floor. The money will move faster around your casino, with lesser expenses and increased security. The solution will also bring a positive influence to your revenue and player satisfaction, without incurring additional hardware costs to the slot machine.

With SlotScanner™ Player Tracking you can recognize and individually approach your best players and reward them accordingly to their spend. You can also extract information that can help you build a useful marketing database for effective CRM purposes.

With SlotScanner™ Progressive and Mystery, Local or Wide Area Jackpot System you can link many slot machines and create up to 8 levels of simultaneous jackpots to keep your players interested all the time and to better promote your casino.

With SlotScanner™ MultiSite module you can comfortably control your dislocated venues from your Head Office. Real time data, various alarms and swift decisions enable you to manage your venues for better performance and lower costs.

Slot floor under control

- developed by real-world experts
- built to support 24/7 casino operations
- enhances profitability
- increases player retention
- increases security of slot operations
- increases your knowledge of your customers' value and worth
- controls complementary costs
- promotes longer and faster play
- optimizes your slot-floor processes

Maintenance and support

The system is built rock solid to support 24/7 casino operations. This is why you will be able to access all of the important information without having to endure one minute of downtime. SlotScanner™ monitors a vital part of your casino operation: the slots floor and the cage. We understand how mission-critical it is to have the system up and running at all times. That is why we provide around the clock maintenance and support.

Multisite – chain of locations at your fingertips

Multisite functionality provides the central database server with all the information from your floors in real time. You can centrally monitor your revenues, set up alarms for various events on the floor, monitor players, progressives and mystery jackpots.

The system is built rock solid to support 24/7 casino operations.

Accounting and Cage

SlotScanner™ was created to cover all of your casino needs with the following functionality:

Accounting functionalities

- automatic meter readings (per pre-defined time period)
- history of slot-machine descriptions
- management of multiple slots meters (mechanical and electronical)
- real-time hopper level calculation
- real-time slot machine status report
- instant alerts for network disconnection, door openings, tilt or malfunctions and jackpots
- real-time meter status collection at any meter change (floor mirroring)

Cage functionalities

- full cage management and access control
- automatically collects data for jackpot and fill slips
- integrated cashflow management for cage and vault
- automatic validation processing
- currency exchange functionality
- hard and soft counting and variance reporting

Management functionalities

- financial history for individual slot machines
- variance between manual and automatic meter readings
- variance between meter and cash transactions recorded
- overall floor realization
- different statistics and variance analyses
- event monitoring & alerting
- jackpot and hand-pay variance reporting
- multi-criteria reporting by location, manufacturer, model and denomination

Remote management functionalities

- surveillance from remote locations, including alerting and reporting

Security-related functionalities

- efficient and flexible role-based access control
- logging of sensitive data modification
- supports slots maintenance based on RFID card identification
- automatic collection of meter status at door incidents
- alerting via SMS or e-mail

Money Tracking functionalities

- supports RFID identification for hand-pay or fill, including a confirmation at cage and slot machine
- every soft or hard clearance is automatically tagged with the RFID of the person, performing clearance
- automatic meter collection at all clearances

SlotScanner™ has advantages

- its functionality is based on extensive analysis of user needs
- product tested extensively by extremely demanding users
- professional maintenance and support services
- fast installation, easily connected with slot machines
- competitive pricing
- it is flexible and integrates easily with your existing floor procedures
- no data is lost even when slots are offline
- any jurisdictional requirements can be covered with little or no adjustments
- it integrates easily with other casino management software

SlotScanner™ brings benefits

Management benefits

- taking better decisions based on on-line information
- keeps your casino procedures automated, optimized and under control
- alerts managers about erratic procedures
- simplifies financial and other types of reporting
- shows data and analyses from different venues and the whole system simultaneously
- calculates trends and performs financial analyses in order to optimize the slot floor
- enables efficient analysis and optimization of popular slots, locations and games

Security benefits

- enables close control of the slots
- performs slots access control
- performs value transaction control
- reduces mistakes due to human error
- alerts about procedure or assets abuse
- increases reliability, which enhances players' trust

Financial benefits

- automatically reports malfunctions, which means lower human resource costs
- automates certain procedures, which means less staff on the floor
- increases slot machines' activity time with automatic jackpot and malfunctions reporting

Player benefits

- prompts faster response to jackpots or malfunction, causing greater player satisfaction
- enables faster service

Ticketing

If you wish to optimize your casino floor operations and eliminate or reduce coin operations, you need to consider introducing a ticketing system to your casino floor. SlotScanner™ Ticketing is a good option for those casino operators, who wish to offer extra benefits to its players and enable a faster and more profitable play. Your slot players can benefit from a new level of security and convenience with SlotScanner™ Ticketing module.

SlotScanner™ Ticketing reduces or even completely eliminates hopper fills, simplifies hand pays and thus directly increases the efficiency of your casino staff. With the ticket a player can change between slot machines quickly without having to wait for and handling buckets of coins. This translates directly into longer playing times and increased income. Operators can additionally motivate their players with the issuance of the promotional tickets, which are extremely attractive to new players and help to greatly increase player retention. SlotScanner™ Ticketing can be configured to meet the needs of your casino and is proven to yield a return on investment within less than 12 months.

"Promo tickets" are an efficient tool for additional promotion of the casino. They are awarded to new players and can be cashable or not.

With the ticket a player can change between slot machines quickly, and this translates directly into longer playing times and increased income.

Features

- Hopper only, ticket only or combined gaming supported
- Multi-denomination supported
- Marketing: promotional tickets for attracting new players can be cashable or not
- Ticket accounting: control of the auditing and communication of all ticket and event information in the ticketing system.
- Existing bill sorters can count, sort and separate tickets from currency during the soft-count process
- High-speed scanner is connected to the soft-count station
- Reports:
 - Session reconciliation & audit report
 - Ticket issuance, liability and redemption report
 - Expired and void ticket reports
 - Cashier sessions and cashier issuance reports
 - Promotion detail and performance report
 - Soft count with verification, exception and expected drop reports

- Collects machine meter data from every machine for reconciliation with audit and soft-count sessions
- Enables a unified system for all ticket-ready slot machines
- Is seamlessly integrated into the SlotScanner™ Accounting & Cage module
- Decreases operating costs (coinless operation)
- Simplifies cage processes
- Safe against fraud (unique code on the slip, one-time reading only)
- efficient ticket tracking
- overview of the issued, cashed in and active tickets by number and value

Benefits for players

- tickets are extremely comfortable to use
- the exact value is printed on the ticket
- player's privacy is guaranteed,
- it is very easy to move from one slot machine to the other
- no hold-ups at the cashier's desk,
- tickets are handy for handling and safekeeping

Benefits for the staff

- elimination of hopper management, cash-outs and other messy handling of coins
- staff can concentrate on the relationships with the guests and therefore increase efficiency.

Benefits for the casino operator

- compared to coins, tickets are inexpensive to purchase and manage,
- the system enables additional income from promotional activities (promo ticket, advertising on the tickets),
- as it is easier to move from one slot machine to the other, the play is faster and the profits are higher,
- no more coins handling,
- higher productivity translates into greater profitability.

Player Tracking

Casino players appreciate being recognized on the floor and approached individually. They would love to receive rewards according to their individual spend and they would also like to choose the rewards themselves.

With SlotScanner™ Player Tracking module you can offer all this to your players, and more. You can enable your slot floor personnel to spend quality time with the players of their preference, instead of constantly monitoring the floor. Apart from gaining substantial advantages in your relationship with your players, SlotScanner™ Player Tracking will also help you manage your slot floor more efficiently, build better relationships with your sales agents and increase profitability.

By centralizing the information you have obtained on your players, you can:

- segment players by different parameters
- reward players with points earned by play (game type, location, time interval, day of the week...)
- create time specific promotions and reward prizes
- do a full comp and point analysis
- issue and track redemptions, coupons and comps
- query database by specific marketing criteria and direct mail
- associate a player to a charter bus or junket and track agent commissions

Player ID	Game Type	Location	Time Interval	Day of the Week	Points Earned	Comps	Redemptions	Charters	Agent Commissions
1001	Slot	Area A	10:00-11:00	Monday	1500	500	200	1	100
1002	Table	Area B	12:00-13:00	Tuesday	2000	700	300	2	150
1003	Slot	Area C	14:00-15:00	Wednesday	1800	600	250	1	120
1004	Table	Area D	16:00-17:00	Thursday	2200	800	350	2	180
1005	Slot	Area E	18:00-19:00	Friday	1600	550	220	1	110

Have an immediate overview of all your best players, including their location on the floor.

SlotScanner™ Player Tracking will help you manage your slot floor more efficiently, build better relationships with your customers and increase profitability.

Features

- it is easy to use
- it collects comprehensive data and uses it to create an exhaustive list of reports to suit every management need
- endorses a user-friendly mailing list generator
- features expense management tools
- enables faster player recognition on the casino floor
- live information on selected player's activity on the slot floor
- enables proactive player contact management – pop-up reminders prompt hosts to contact players
- you can reward premium players at their favorite game
- you can measure spend within a group as a whole and on the individual level to successfully validate an agent's contribution
- enables optional selection of rewards at the self-service points redemption kiosks
- supports RFID technology

Player benefits

- players are rewarded according to their spend
- players are recognized on the floor and individually approached
- rewards are tailored to the players' individual preferences
- players can choose their own rewards at the self-service points redemption kiosk

Staff benefits

- staff gains important information to successfully approach players individually,
- instead of constantly overseeing the floor, staff gains extra freedom to really interact with the players,
- players can be assessed objectively, according to their spend
- staff is immediately and automatically alerted when a hotplayer appears on the floor
- enables your slot floor staff to recognize hot and VIP players right at the game

Management benefits

- optimization and efficient costcontrol of all marketing costs
- a well-balanced slot floor: players are motivated to use certain machines at certain times
- exhaustive reports help make informed decisions
- increased player retention increases profitability
- since players are no longer assessed subjectively, profitability is increased
- SlotScanner™ Player Tracking supports cross-promotion with your other services (restaurants, bars, etc.)
- enables higher retention of the casual, as well as the top-tier players
- creates a competitive advantage

Local or Wide area, Progressive or Mystery Jackpots for most various types or brands of slot machines

Progressive and Mystery Jackpot System

With an attractive Jackpot you can keep your players interested and better promote your casino. Progressive Jackpots are win based. A player has to win a predetermined winning combination on the slot to trigger the Jackpot. SlotScanner™ can help create Progressive Jackpots for wide or local area progressives as well as for the stand-alone variation. On a single location, you can link many slot machines into one Progressive Jackpot and feature up to eight different Jackpots levels increasing simultaneously. Mystery Jackpots on the other hand are random based or with other words, they can hit anytime, which is a very attractive feature for the players.

Features:

- robust solution, tailor-made for each customer
- wide area & real-time display of Jackpot awards
- centralized control of Progressive and Mystery Jackpots
- maximum flexibility to create new Jackpots from various machine types and brands attractive Jackpot levels visualization on Plasma or Lcd screens SlotScanner™ Jackpot

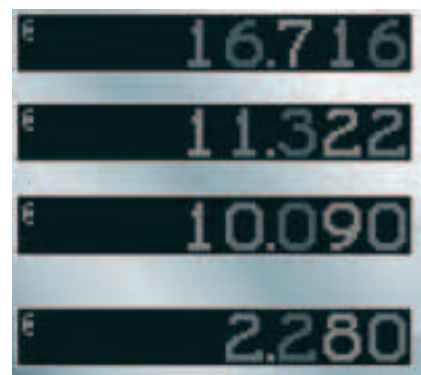

System supports:

- Local or wide area Mystery Jackpots
- Local or wide area Progressive Jackpots
- Standard SAS Progressive Jackpots

Mystery jackpots can be triggered by a number of conditions, easily set by the casino management, like:

- standard
- time-based (jackpot hits at a certain hour)
- prize-based (jackpot hits when a coin threshold is surpassed)
- occupancy-based (jackpot hits when a certain casino area has a large enough amount of players)
- fixed hit

Our solution also supports LED, plasma or LCD indicators for attractive displays of jackpots or other information.

You can have up to 8 different progressive jackpots going at the same time.

Cashless

Cashless module is an efficient tool to move the money around the casino faster, with lesser cost and to greater players' satisfaction. It is also a sign-off-the-times module: "plastic money" is gaining advantage over cash and the trend has unmistakably entered the gaming world. It comes natural to the players to use plastic credit cards instead of coins, bills or tickets. This is probably the major reason for the Cashless module's increasing popularity.

The money can be loaded on the card at the cashier's desk. When the card is inserted into the slot machine, the assets are transferred into the credit meters and can be played. They can be transferred back onto the card with the cashout button, and the player is fast on his way to the next slot. At the end of the evening the money can be redeemed at the cage or at the self-service terminal.

This procedure is extremely secure for the player as well as for the casino. The players can additionally enhance security by using optional PIN protection.

Data on all transactions are stored in the central database of the main server, where they are ready for reporting purposes. The information can also be used for the bonusing purposes within or outside the loyalty programs.

Hardware is basic and compatible with all machine types - from slant top to upright ones, be they newer or older models.

Benefits:

- fast and secure money flow around the floor
- simple and easily understandable for all types of players
- boosts revenues by fast and uninterrupted play
- can be used on all machines - denomination independent
- lesser down-time for maintenance
- maximizes cost-saving by eliminating coins and bill handling

Advantages

- Compatible with all types and slot machine brands
- Increased customer satisfaction
- Lower costs of slot-machine maintenance
- Less demand for the cage services
- All-in-one: Player Tracking and Cashless card

Benefits for the Players

- Easier to carry around than large amounts of cash or coins
- Fast and easy bet-placing and moving around the casino
- High level of privacy
- Cards can be generic or personalized

Comfortably control all your
dislocated venues from your
Head Office

Multisite

You can now visualize all of your slot floor layouts and get an instant feel of what is going on in each of your venues: it has never been easier to overview casino networks with more dislocated locations.

SlotScanner™ Multisite module connects various sites to your central office via permanent network connections.

SlotScanner™ Multisite module brings many benefits:

- single, unified slot-reporting system - one set of reports for all your casinos
- highly efficient and cost-effective online management of multiple locations
- centralized evaluation of performance for every slot machine
- swift and effective compliance with new regulations through your operation
- your maintenance team can plan their actions better by getting extensive data from the "machine technical status" report

It brings additional benefits to the management of Players Clubs:

- A single player tracking card throughout all your venues
- Increases player loyalty with equally high status in each of your venues
- More efficient marketing

Opening up possibilities

Interfaces

Pager

Your floor personnel can stay on top of important events at all times. Define events that merit immediate attention on the floor and the system will send an alert to selected pagers. Message will include type of event and its exact location. You can also assign different floor areas to different users. By setting pager pits you can allow your personnel to be always on top of all the events in their specific area.

Coin and bill handling

SlotScanner™ supports coin scales, produced by Mettler-Toledo International. Coins are weighed and their value is calculated from the reading. Slot position and denomination are entered into the coin counter and when confirmed, the data is automatically entered into the system. When drop count is performed, it is entered as a drop into the system and can be moved to the vault.

When hopper count is performed, the reading is entered into the hopper counter and coins are returned to the hopper. For the hopper clearance the reading is entered into the system, coins are moved to the vault and the counters are adjusted.

SlotScanner™ also supports Cummins JetSort® coin sorters. With them it is possible to sort and count coins according to their denomination. Coins are automatically sorted straight into bags until predefined quantity is reached. With Glory banknote counters, similar transaction for bill counting is performed.

Casino Reception Desk

Have complete control over your reception desk with SlotScanner™. Add data on your guests, including a photo, and analyze visit patterns, slow periods and peak times. You can also monitor visit patterns by other variables like hour, day of week, age, gender and others.

Our solution supports issuance of entry tickets with additional bonus coupons and advertisements. Additionally, you can customize days of week or hours when you charge an admission fee and analyze ticket issuance by reception clerk, date and other variables.

Your guests with frequent visitation patterns can be awarded RFID cards. They enable them to register and gain entry to the casino very quickly just by putting the card next to the RFID reading unit. You can monitor the process on your computer, and at the same time keep an eye on other important data on the guest like frequency of visits, last visit and birthday.

Advansys products are currently operating in a total of 46 casinos, on over than 7.000 slots

Some important facts

SlotScanner™ is compatible with all major slot machine producers, such as: IGT, Aristocrat, Atronic, Williams, Bally, Novomatic, EGT, Casino Technology, Unidesa, Ainsworth, Amatic, Interblock, Gold Club, Alfa Street, Carat, etc. It is also connectable to slots, which support one of the major communication protocols, like SAS, SYCOM, ASP, MISER, etc.

The SlotScanner™ server computer uses Windows 2003 Server operating system. It uses Oracle 9i (or later) Standard Edition database.

SlotScanner™ user interface graphically visualizes positions and specifics of all your slot machines. Monitoring of events, meters and states, related to an individual machine, is just as simple.

If your slot machine is up and running, so is the monitoring device, installed within the slot machine. While offline, the device stores all relevant data. As soon as the connection with the server is reestablished, the data batch is transferred to the server.

We can adapt SlotScanner™ to different local languages. What is more, every installation includes all languages, supported until the date of installation.

Advansys is dedicated to the development of top of the line, innovative systems for the gaming industry. With extensive experience in gaming and a large body of knowledge in IT systems, Advansys brings together the best of two worlds.

Advansys products also excel in reliability, scalability and customer support. Even though its deliveries are made to support the most mission critical casino processes, Advansys builds its sales strategy on extremely competitive pricing.

Advansys products are currently operating in a total of 46 casinos, on over 7.000 slot machines. Advansys' global presence is enhanced through our partners PacificNet games in Macau and Casino Solutions in Bulgaria.

SlotScanner™ is extremely successful in Slovenia, one of the world's most regulated gaming markets, where it currently holds an impressive 75% market share.
